# KING IMMANUEL C. VISTA

**Full Stack Developer | AI & IoT Engineer**
immanuelvista@gmail.com · 63+ 9761841999 · linkedin.com/in/king-immanuel-vista

## Professional Summary

Full-stack developer and Computer Engineering graduate who builds, deploys, and ships production-ready systems, not just academic prototypes. I've delivered AI-powered platforms, real-time IoT dashboards, and computer vision tools for actual clients across agriculture, education, and smart infrastructure. Fluent across the full stack — frontend, backend, database, and hardware. I learn fast, and can work independently or in a team.

## Technical Skills

Programming Languages: **HTML, CSS, JavaScript/TypeScript, Python, Java, PHP, C++**
Frameworks & Libraries: **ReactJS, Next.js, NodeJS, Flask, Express.js, PyTorch, YOLOv8**
Databases: **PostgreSQL, MySQL, MongoDB**
Hardware & IoT: **Raspberry Pi, ESP32, Arduino, Edge Impulse, OCR**
Developer Tools/Other skills: **Git, GitHub, Figma, UI/UX, CI/CD, Arduino IDE**

## Experience

**Full-Stack & AI Developer** | Freelance | Remote ***September 2025 - Present***

- Delivered 3 production AI computer vision systems to paying clients in agriculture and livestock management, built on YOLOv8 and Raspberry Pi — on time and within scope.
- Built a real-time pig activity monitoring system with custom-trained YOLO model and live camera feed, giving farmers actionable behavioral insights.
- Engineered a bean quality segregation system that autonomously identifies and removes rotten beans from batches — directly reducing manual labor costs for the client.
- Developed a live IoT GPS Location Tracker with a full web dashboard, streaming real-time ESP32 device coordinates via Flask and PostgreSQL.

**IT Support Intern** | NEXUSCLOUD IT SOLUTIONS INC | Ortigas Center ***June - July 2025***

- Configured and set up 15+ workstations and assisted with LAN network setup across office floors.
- Provided Tier - 1 technical and customer support, diagnosing and resolving hardware/software issues.

## Featured Work

**Acadify — Full-Stack Academic Platform** *(thesis)* ***February, 2026***
*Tools: Python, PyTorch, Flask, PostgreSQL, YOLOv8, OCR — Full-Stack Web Application*

- Architected and launched a full-stack academic platform handling course management, student enrollment, AI grading, and grade tracking — serving real users at acadify.online.
- Integrated OCR and YOLOv8 to automatically grade handwritten exam sheets, eliminating manual checking and reducing instructor workload significantly.
- Designed the full database schema in PostgreSQL and built RESTful API endpoints.

**AI Voice to Income Statement** ***October, 2026***
*Tools: NextJS, GroqAI, Neon PostgreSQL — Full-Stack Web Application/automation*

- Developed a full-stack web application that converts voice recordings and Taglish daily recaps into structured financial transactions using AI-powered transcription and transaction extraction.
- Designed and integrated the application's frontend, backend, database schema, and AI workflows to streamline financial reporting and reduce manual data entry.

**Pig Monitoring System** *(client)* ***December, 2025***
*Tools: YOLOv8, Flask, Python, Raspberry Pi, MySQL*

- Built a real-time livestock monitoring system for a paying client, tracking pig activity via live camera feed and a custom-trained YOLO model.
- Deployed on Raspberry Pi hardware, streaming live detections to a PostgreSQL-backed web dashboard accessible remotely.

## Education

**University of Rizal System | B.S. Computer Engineering | Philippines** ***Aug 2022 – June 2026***
**Udemy –** The Complete Full-stack Web Development Bootcamp by Angela Yu**.**
**Cisco Networking Academy –** Networking Basics, Network Addressing and Basic Troubleshooting, Networking Devices and Initial Configuration.
